**Subject: Recommendation Letter for Data Scientist**

To whom it may concern,

My name is Danilo Valerio and I am a Senior Key Expert and project manager at Siemens Austria for a variety of innovation and digitalization projects. I worked very closely with Mr. Maruscak. It is my pleasure to recommend him as a Data Scientist for your company.

Mr. Maruscak worked in my department for five years. His responsibilities covered the entire spectrum of the data science process, from data acquisition, wrangling, and preprocessing, to modeling, visualization, and final presentation of results. In his time at Siemens, he demonstrated to be an excellent data scientist, an outstanding communicator, and a great team player. He proved on multiple occasions to hold the scientific/technical skills necessary to deal with complex data science and machine learning projects, as well as the necessary soft skills to interact with business stakeholders and understand their needs. He was the main contributor of several machine learning and data-driven projects in the department, dealing both with structured and unstructured data, and producing both business reports and dynamic interactive dashboard/visualizations.

Mr. Maruscak started as a working student, but very quickly showed to be a hard worker and dependable employee. His formal educational background in mathematics and statistics proved to be extremely beneficial for our daily challenges many times. He never disappointed me by missing a deadline and I could always rely on him to handle both difficult problems and difficult clients. He has the social skill to always interact in a polite and friendly way and contributed positively to the harmony within the team and with the clients.

In addition to our employment at Siemens, we entered a joint venture of lecturing at a bachelor's degree in Informatics at IMC Fachhochschule Krems GmbH. We split several data-science related courses and co-taught Capstone Project. This experience came with a set of challenges of its own, but unexpectedly, even here I was impressed by how we handled those challenges, which was reflected in positive evaluations of the students at the end of the semester.

Overall, he is a skillful and passionate worker, and I am happy and proud to offer my recommendation for him to his future employers, as I have no doubts that he will be able to meet and exceed your expectations. I am honored to have had the chance to mentor this person, and he will surely be missed here at Siemens Austria. I wish him nothing but the best in his future career steps!

Sincerely yours,  
Danilo Valerio
